

4. Audio Quality Evaluation / 音频质量评估

- Overall Quality: Good
- Background Noise: Mild
- Speaker Overlap: None
- Clipping / Distortion: None
- Speech Rate: Normal
- Intelligibility: High
- Accent Impact: Low
- Recommended Use: Suitable for Mandarin ASR training, customer-service intent recognition, and dialogue-turn segmentation.

5. Model Evaluation Notes / 模型评测说明

If evaluating an ASR model output against this transcript, I would focus on:

- 1 Whether numbers such as “8273” and “19” are correctly recognized.
- 2 Whether customer-service terms such as “付款成功,” “出库扫描,” and “退货流程” are preserved.
- 3 Whether the model incorrectly removes meaningful hesitation markers such as “嗯” or uncertainty phrases such as “应该是.”
- 4 Whether punctuation reflects the speaker’s intent and natural semantic boundaries.
- 5 Whether speaker turns are separated correctly.

6. Final Judgment / 最终判断

This audio is suitable for AI training and evaluation because it contains natural conversational speech, practical customer-service vocabulary, mild hesitation, clear intent shifts, and useful semantic distinctions.

该样例适合用于 AI 训练与评测，因为它包含自然对话、真实客服场景词汇、轻微犹豫、明确意图变化，以及“取消”和“退货”等关键语义差异。

Methodology Summary: I evaluate Chinese speech data by combining transcript fidelity, acoustic detail, speaker-turn logic, domain terminology, ambiguity handling, and model-readiness judgment.
